Bento Portfolio Setup Guide

The No-Code Way to Launch Your Professional Site

THE GOLDEN RULE

Inside the code files, you will see text inside **"quotation marks"**. You can change the text inside, but **NEVER** delete the marks or the commas (,) at the end of lines. Doing so will break the site!

Step 1: Prepare Your Files & Images

Before uploading anything, we need to make sure your branding is ready. Computers are picky about names, so follow these steps exactly:

- **Your Profile Picture:** Choose a high-quality square photo. Rename the file to `avatar-placeholder`
- **The Folders:**
  1. Open your project folder on your computer.
  2. Go into the **public** folder.
  3. Drop your new `avatar-placeholder.jpg` here. Click "Replace" when prompted.

Step 2: Create a Free GitHub Account

GitHub stores your files and tells your website when to update.

1. Go to www.github.com and sign up for a free account.
2. Click the + icon in the top right and select **New repository**.
3. Name it `my-portfolio`, set it to **Public**, and click **Create repository**.

Step 3: Upload Your Portfolio Code

1. Inside your new GitHub repository, click the link that says **"uploading an existing file"**.
2. Open your project folder on your computer.
3. Drag and drop the files into the GitHub box.
4. Scroll down and click the green **Commit changes** button.

Step 4: Connect to Netlify (Going Live)

1. Go to www.netlify.com and log in using your GitHub account.
2. Click **Add new site** > **Import an existing project**.
3. Select **GitHub**, choose your `my-portfolio` repository, and click **Deploy**.

Step 5: Personalize Your Site (No Coding Needed!)

1. On GitHub, open the **src** folder and click on **config.ts**.
2. Click the **pencil icon** (Edit) in the top right.
3. Change the text inside the quotation marks (e.g., replace "Chloe Evans" with your name). Do the same for the rest of the fields.
4. Click **Commit changes**. Wait 30 seconds, and your live site will update automatically!

Step 6: Choose Your Professional Website Name

Let's give your site a clean address before we finalize the social preview.

1. In Netlify, click **Site Configuration** > **Change site name**.
2. Type in your professional name (e.g., `yourname-portfolio`). Your new website address is now `https://yourname-portfolio.netlify.app`.

Step 7: Fix the Social Media Preview

Now we need to tell your code what your brand new website address is!

1. On GitHub, open **index.html** (in the main folder) and click the pencil icon.
2. Find `og:url` and replace the old Netlify link with your new, professional link from Step 6.
3. Do the same for `og:image` and `twitter` tags. Save the changes.
